PLANTING, CULTIVATING, ETC.

If trees cannot be planted immediately when received they should be unpacked and set in a trench; cover roots with mellow earth and thoroughly wet. If trees are frozen when received, the whole bundle should be laid in a trench and covered with earth, or placed in a cool cellar until the weather moderates.

To plant trees dig holes large enough to hold roots in their natural position. When a plow can be used the holes are easily dug by throwing out two or three furrows, and shoveling out the dirt where the trees are to stand. Set the tree so that it will stand the same depth as it did in the nursery, then fill in soil to cover roots, and pour in a bucket or two of water. When this is soaked into the ground, then fill in the balance of soil, and then cut the tree back to about 2 to 4 feet, according to size and age of tree.

Cultivating.—Frequent and thorough cultivation, especially for the first year or two, is almost necessary.

To prevent rabbits from injuring young trees, would suggest that either corn stalks or old newspapers be tied around each tree.

Selection of Varieties.—Except where particular varieties are wanted, the best assortment is secured by leaving the selection to us, stating the general character of soil, the desired time of ripening, etc.
